

10/525128

DT01 Rec'd PCT/PTO 18 FEB 2005

(New Claim)

1. Device for the control of direction of gas flows of a respirator,
with a respirator
with an aerosol-producing fogger located in the in-and-out breathing zone of the
respirator and
with a bypass by means of which the gas is guided through the fogger as it flows
in one direction in order to carry with it aerosol and by means of which the gas is
guided past a fogger via a bypass as it flows in the other direction.
